

ISU Chemical Instrumentation Facility
External Usage Charges - 2006

This is a list of current prices for non-ISU affiliated users. These prices are approximately 2.86 times higher than the internal ISU rates, as determined by an analysis of all costs, including overhead. In general, instrument usage is charged "by the hour". In some cases the rate decreases after several hours of continuous use to accommodate long-term data acquisitions. For some instruments, charges are computed differently. The charge for the elemental analyzer is "per run". X-ray data sets collected and solved by the crystallographer are charged "per structure". The charge for "direct staff time" relates to samples submitted for analysis (where training and student operation are the norm), and all other services not defined in the rate structure.
